

SCHOOL OPERATIONS AND STUDENT SERVICES OS

Horizon Sales Kit

Everything needed to take a UAE school from first meeting to a signed one-term pilot: the proposal, the data protection pack, the meeting checklist and the follow-up material.

What is in this kit

01	Pilot proposal A one-term pilot a school can sign	pilot-proposal.md
02	Data protection pack For the IT lead and the board	data-protection-pack.md
03	Case study template Filled from the school's own figures	case-study-template.md
04	Testimonial request Email and consent, English and Arabic	testimonial-request.md
05	Meeting kit Before, during and after the live meeting	meeting-kit.md
06	Advisor outreach Inviting a respected UAE educator	advisor-outreach.md
07	Referrals and school groups The referral offer and the group pitch	referral-and-groups.md
08	Talking about ROI Time saved, measured in the pilot	roi-notes.md

How to use it. Text in **[brackets]** is a decision for the founder or a detail for the school (prices, dates, names, terms). Fill every blank before a document leaves the company. Sample import files are in docs/sales/kit/samples/ .

Horizon pilot proposal: one term

A one-term pilot a school can sign

Prepared for: [School name]

Prepared by: Nexus AI Assurance FZCO, +971 52 377 7246, [email]

Date: [date]

1. What we propose

A one-term pilot of Horizon, the School Operations and Student Services OS, with five launch services, real staff and real families, and success measures agreed before we start. If the agreed measures are not met at the end-of-term review, the school pays no pilot fee.

2. Scope

Five launch services

These are live in every new Horizon school from day one, with bilingual forms, approval routes and service targets the school can change.

Service	Who uses it	Default target
Request a school document (enrollment, good conduct, fee and other letters)	Parents, students	72 hours
Report or request an absence	Parents, students	24 hours
Book a parent meeting	Parents, staff	48 hours
Refer a student: academic concern	Staff (teachers)	48 hours
Report a safeguarding concern	All staff	4 hours

The school may swap any of these for another service from the catalog (29 services are installed), for example counselor meetings or subject changes.

Modules included

- **Services and requests:** service catalog, bilingual forms, request tracking with a progress view, approvals inbox with signatures.
- **Workflows:** approval routes the school can edit in a visual builder, with validation and a dry run before publishing.
- **Documents and letters:** bilingual PDF letters (English and Arabic) with the school's logo and seal, family document sharing, signed download links.
- **Meetings:** booking against real availability, reminders and calendar files.
- **Cases and safeguarding:** referrals, case pages, restricted safeguarding queue for the Designated Safeguarding Lead, recorded decisions on informing families.
- **Notifications:** in-app and email, in English and Arabic. Parents and students can also install Horizon on their phone home screen and turn on app alerts; WhatsApp messages can be switched on per notification type once the school's WhatsApp sender is approved, and each parent opts in with their own number.

- **Analytics:** requests, time to close, share closed within target, meetings held, and a Pilot measures panel for the principal (staff active, parent adoption, median days to issue a letter, requests closed on time, meetings booked) for any chosen period, with CSV download. Wellbeing and safeguarding records are always excluded.
- **Administration:** setup wizard, Import center, roles and access, invitations and family join code, compliance settings (including personal data export and erasure), audit log.

Other modules (grades, timetable, career guidance, university planning and more) can be switched on during the pilot if the school wants them, but they are not part of the success measures unless agreed in writing.

Not in scope

- Connecting the school's student information system is optional. Data comes in through the Import center (CSV or XLSX exports); if the school's system can publish a scheduled export over HTTPS or call an API, Horizon can also read it on a schedule or receive it through the Horizon API. Setting this up with the school's system supplier is outside the pilot measures.
- SMS delivery (not built). Notifications are in-app, email, phone app alerts and, where the school enables it, WhatsApp.
- Fee collection or payments. Horizon can show families a link to the school's own fee payment page, but processes no payments.

3. Timeline

When	What happens	Who
Before week 1	School sends the data request (staff, students and guardians, classes, calendar, logo, letters, DSL names). Templates are in the Import center.	School pilot lead
Week 1: setup day	A 90-minute guided setup: school profile and brand, term dates, Import center, roles and access, the five launch services, letter preview with the school logo.	Horizon and school pilot lead
Weeks 2 to 3: staff	Staff are invited, trained in a 30-minute session, and use the services internally (teacher referrals, safeguarding concerns, approvals). Fixes to forms and routes are made.	School pilot lead, staff champions
Weeks 4 to 10: families	Families join (email invitation or the family join code poster). Parents use documents, absences and meetings. Mid-pilot check-in in week 6.	School, with Horizon support
End of term: review	Results against each success measure, read from the app. Decision: continue, change, or exit.	Both

Review meeting date: [review date]

4. Roles

School

Role	Responsibility	Name
Pilot sponsor (Principal)	Owns the decision, chairs the review	[name]
Pilot lead (School administrator)	Runs setup, imports data, first contact for staff	[name]
Designated Safeguarding Lead and deputy	Confirm the safeguarding route and access	[name] , [name]

Role	Responsibility	Name
Data protection or IT lead	Reviews the data protection pack, approves processors	[name]
Registrar	Approves letters and documents	[name]
Staff champions (one teacher, one counselor)	Use it first, collect feedback	[names]

Horizon (Nexus AI Assurance FZCO)

Role	Responsibility	Name
Account lead	Pilot plan, weekly check-in, review meeting	[name]
Onboarding support	Setup day, import help, staff training	[name]
Technical contact	Availability, incidents, data requests	[name]

Support hours and response times: [support hours and response times]

5. Success measures

Agreed before week 1. Baselines come from the school's current process (a short count or estimate in week 1).

Measure	Baseline	Target	How Horizon measures it
Days to issue a school document	[baseline]	[target]	Analytics: Pilot measures, "Median days to issue a letter", plus each request's submitted and completed times on its request page.
Share of requests closed within target	[baseline]	[target] %	Analytics: Service levels, "Within target" (requests closed before their service target, last 7, 30 or 90 days).
Parent adoption	[baseline]	[target] % of families	Analytics: Pilot measures, "Parent adoption" (parent accounts linked, of guardians on record). Invitations and Join requests show the detail.
Staff active	[baseline]	[target] % of staff	Analytics: Pilot measures, "Staff active" for the chosen period (staff seen in the app or with a recorded action, of all active staff accounts).
Requests handled online	[baseline]	[target] per month	Analytics: Requests received and Requests by service.
Meetings held as booked	[baseline]	[target] %	Analytics: Service levels, "Meetings held".

Wellbeing and safeguarding records are never counted in these figures, by design.

6. Pilot guarantee

If the agreed success measures are not met at the end-of-term review, the school pays no pilot fee.

- Pilot fee: [pilot fee] for [number of students] students, invoiced [when].
- Measures count as met when: [all measures met / an agreed number of measures met].

- The guarantee assumes the school completes setup day and sends invitations by the end of week 3: **[confirm wording]**.

7. Data handling

During the pilot

- The school is the data controller. Horizon processes data only to run the service for the school.
- The school's data sits in its own tenant, separated from every other school by database row level security.
- Only people the school invites can sign in. Horizon staff get access only if the school adds them as an administrator, and are removed at the end of setup or the pilot.
- Hosting region: **[hosting region]**.
- Details are in the Horizon data protection pack.

At exit or at the end of the pilot

- **Export:** the school exports its own data at any time from Admin > Compliance > School data export: a CSV file per table and every stored document, prepared in the background, with a download link that works for 24 hours. Horizon can help on request.
- **Deletion:** after the export is confirmed, Horizon deletes the school's records from the live database and its stored files within **[number]** days, and confirms in writing. Backup copies expire within **[backup retention period]**.

8. Easy exit

- Either side can end the pilot with **[notice period]** written notice.
- No long-term commitment is created by this pilot.
- If the school ends the pilot early, **[fee treatment on early exit]**.

9. Signatures

For [School name]	For Nexus AI Assurance FZCO

Date:	Date:

Horizon data protection pack

For the IT lead and the board

For the school's IT lead, data protection lead and board. A practical summary of how Horizon handles personal data, set against the main duties of the UAE Personal Data Protection Law (Federal Decree-Law No. 45 of 2021). It describes the product as built today; where something is not built, it says so. It is not legal advice.

Vendor: Nexus AI Assurance FZCO, +971 52 377 7246, [\[email\]](#)

Hosting region: [\[hosting region\]](#)

1. Roles

The school is the controller. Nexus AI Assurance FZCO is the processor and acts only on the school's instructions, set out in the [\[data processing agreement\]](#).

2. What data is processed

Category	Examples	Notes
Identity and contact	Names in English and Arabic, student number, grade, date of birth, guardian email and phone	From the school's import or entered by staff
Identity documents	Emirates ID and passport numbers	Optional per school (off, optional or required). Encrypted at field level.
School operations	Requests, forms, approvals, letters, meetings, documents	Created by use of the services
Academic	Classes, grades, report cards, course plans	Only if the school switches those modules on
Wellbeing and safeguarding	Cases, notes, referrals, chronology	Special handling, see section 6
Account and security	Sign-in email, hashed password, last active time, audit events	Passwords stored as bcrypt hashes. Last active time is updated at most every 15 minutes and is used for the school's own usage figures.

3. Purposes and lawful basis

Each school has a list of processing purposes with a lawful basis, under Admin > Compliance (for example: delivering education, student wellbeing, child protection under Wadeema's Law, health care, photos and media, AI-assisted drafting, trips). Purposes that need consent record consent per student or guardian. The school's compliance lead can add and edit purposes on screen (name in English and Arabic, description, lawful basis, data categories, whether consent is needed, and the linked retention policy). Every change is recorded in the audit log. Purposes cannot be deleted from the screen, because consent records refer to them.

4. Security controls

Control	How it works
Tenant isolation	Every school table carries the school's id and is protected by Postgres row level security. The application connects as a separate non-owner database role, so it cannot bypass these rules. An automated isolation test suite checks that one school can never read another's rows.
Encryption at field level	Emirates ID and passport numbers are encrypted with AES-256-GCM. Only the last four digits are kept in clear for display. Each reveal of a full number is permission-checked and recorded in the audit log.
Encryption in transit	The application is served over HTTPS. Files are downloaded through signed HTTPS links that expire after five minutes.
Encryption at rest	Provided by the database host and the file storage provider: [confirm at-rest encryption for each provider] .
Files	Stored privately in a folder per school. Never public. Every download passes an access check first.
Sign-in	Email and password, or the school's existing work accounts (single sign-on) when the school enables it. Sessions expire after 12 hours. Sign-in attempts are rate limited.
Logging	Application logs never contain student personal data (ids and counts only).
School API keys	Created by a school administrator with per-area scopes (read or write), shown once and stored only as a hash. A key acts with its creator's current permissions, is rate limited (120 requests a minute) and can be revoked at any time. Usage is recorded in the audit log.
Scheduled sync	Reads the school's export over HTTPS only, with the source credentials stored encrypted. Private and internal network addresses are refused.
Phone alerts	App alerts and WhatsApp messages about wellbeing, safeguarding, medical or confidential matters never carry the content: they say "New message from" the school, with a link that needs sign-in.

5. Access control and roles

- 14 built-in roles (administrator, principal, registrar, head of department, teacher, counselor, career advisor, wellbeing lead, Designated Safeguarding Lead and deputy, nurse, IT support, student and parent). The school can copy, rename and create roles.
- Every page and action checks permissions on the server. Role changes apply on the person's next click.
- Granting a sensitive permission (safeguarding, wellbeing cases, medical, identity numbers, audit log, role management) requires typing the role name to confirm.
- "Access check" shows exactly what any person can see and which role grants it.
- Parents see only their own children. Wrong details when joining reveal nothing, and repeated wrong attempts are locked out.

6. Wellbeing and safeguarding cases

- All access goes through one access module. These records never appear in global search, dashboards, analytics or parent and student portals unless that module allows it.
- Staff who raise a safeguarding concern see only its status. The DSL and deputy see the full record.
- Emergency (break-glass) access is time-limited, needs a reason and alerts the DSL.
- Every view of a sensitive record writes an audit event.

- Families are never notified automatically about wellbeing or safeguarding cases. Informing a family is a recorded staff decision with a reason.

7. Audit log

Append-only: the application's database role cannot change or delete audit events. It records who did what and when, including every view of a sensitive record and every identity number reveal. Authorised staff can filter and export it as CSV; the export itself is logged.

8. Retention

Retention periods are set per record type under Admin > Compliance, and the nightly background job applies them (review, anonymise or delete). Safeguarding records are review-only and are never deleted automatically. Defaults, which the school should confirm with its regulator:

Record	Default period	Action
Student academic record	50 years	Review
Safeguarding cases	25 years	Review only
Wellbeing and medical	7 years	Review
Academic and behaviour cases	6 years	Review
Service requests	3 years	Anonymise
Audit log	7 years	Delete
AI drafts	1 year	Delete
In-app notifications	180 days	Delete

9. Processors and switches

Each processor is listed under Admin > Compliance as "not approved" in a new school, so the school reviews it. Cross-border transfers are off by default.

Processor role	What it receives	Switch
Cloud hosting (application, database, background jobs)	All school data	Required. Region: [hosting region]
File storage	Uploaded and generated documents	Required. [storage location]
Email delivery	Recipient email, notification subject and text	Without it, emails are not sent (in-app only)
WhatsApp messaging	The parent's own number and an approved message template (sensitive matters as a generic line only)	Off unless the school enables it per notification type; each parent opts in with their own number and an explicit consent, which they can withdraw
Phone app alerts (web push)	A short alert title and link, sent to devices the person subscribed	Each person opts in per device in Settings

Processor role	What it receives	Switch
AI model provider	Only the facts a drafting task needs (see section 10)	AI can be switched off for the school entirely

Named providers, locations and contract terms: [processor list with locations, supplied with the data processing agreement].

10. AI rules

- All AI calls go through one provider module. Every call is recorded.
- Wellbeing, safeguarding and medical data is never sent unless the school turns on sensitive AI processing, which requires a recorded reason and is audited. Default: off. Blocked calls are recorded as blocked.
- AI output is always a draft. A person reviews it and accepts or discards it before anything is shared.
- AI can be switched off for the whole school. Without an AI provider key, a built-in drafter works offline from the same facts.
- Eligibility for university programmes is decided by rules, never by AI.

11. Backups

[Backup schedule, retention period and restore test frequency to confirm.] Backups are kept in [hosting region].

12. Incidents

- The compliance area has a breach log with severity, dates, number affected and reporting status (regulator and data subjects).
- Horizon will notify the school of a personal data breach affecting its data within [hours] of becoming aware, with what is known, and support the school's own notification duties.
- Incident contact: [name], +971 52 377 7246, [email].

13. Data subject requests

- Access, correction and deletion requests are logged in Admin > Compliance with a due date, status and recorded resolution.
- **Correction:** staff correct records directly in the app (people, students, guardians); re-importing a corrected file updates rather than duplicates.
- Requests can be logged for students, guardians and staff, with a 30-day due date by default (the school can change it).
- **Access:** under Admin > Compliance > Person data tools, the compliance lead finds the person and downloads one ZIP file: a summary in English and Arabic, the data as JSON and CSV per area, their uploaded files, and a list of what was withheld. The export is recorded in the audit log. Safeguarding content is never released through a personal data export. Wellbeing and medical content is included only for a logged access request and an exporter with access to it. Withheld sensitive records are counted under one general "Restricted records" line, so the export does not reveal that a safeguarding case exists. Identity numbers show the last four digits only.
- **Deletion (erasure):** the compliance lead previews exactly what will happen, confirms by typing the person's reference, and Horizon then deletes what can be deleted, with their stored files. Records the retention settings require the school to keep (academic record, cases, medical, consent and approval evidence, the audit log) are kept and anonymised. Safeguarding records are never deleted. The erasure is recorded in the audit log.

14. Leaving Horizon

- **School data export (self-serve):** under Admin > Compliance > School data export, an administrator with both compliance and school management permissions types the school code and starts a full export. It is built in the background: a CSV file per table, grouped by area, plus the stored documents. The download link works for 24 hours and every download is recorded in the audit log. Wellbeing and safeguarding records are included only when the person exporting can view safeguarding records; otherwise they are left out and counted in the export's README.
- **Deletion:** after the school confirms it has its export, Horizon deletes the school: every record, every stored file and the sign-in accounts used only at that school, after a dry run listing what will be removed. Horizon confirms in writing. Backup copies expire within **[backup retention period]**.

03

HORIZON SALES KIT

Case study template

Filled from the school's own figures

Fill in after the end-of-term review, only with figures read from the school's own Horizon account and only with the school's written consent (see testimonial-request.md). Never include student names, case details or anything from wellbeing or safeguarding records.

[School name]: [one-line result, for example school letters in X days instead of Y]

School: [School name], [emirate]

Curriculum: [curriculum]

Students: [number] | **Staff using Horizon:** [number]

Pilot period: [term and year]

Services launched: [list of the five launch services]

The challenge

[Two or three sentences in the school's words. What took too long, what was hard to track, who was affected. Example prompts: how letters were requested before, how absences reached the office, how teachers raised concerns.]

What the school did

- Setup day on [date]: [what was imported, for example staff, students with guardians, classes].
- Staff live on [date], families live on [date].
- [Any change the school made itself: a form, an approval route, a letter template.]

Results

All figures from the school's Horizon account for [period]. Wellbeing and safeguarding records are excluded from every figure.

Measure	Before	After	Where it comes from
Days to issue a school document	[before]	[after]	Analytics: Pilot measures, Median days to issue a letter
Requests closed within target	[before] %	[after] %	Analytics: Service levels, Within target
Average time to close a request	[before]	[after] hours	Analytics: Average time to close
Requests handled online	[before]	[after]	Analytics: Requests received
Letters issued	[before]	[after]	Analytics: Guidance and letters, Letters issued
Meetings held as booked	[before] %	[after] %	Analytics: Service levels, Meetings held

Measure	Before	After	Where it comes from
Parent adoption	n/a	[after] % of families	Analytics: Pilot measures, Parent adoption
Staff active	n/a	[after] %	Analytics: Pilot measures, Staff active

[Optional chart: Analytics, "Time to close, week by week" (last 12 weeks). Use a screenshot only if it shows no personal data.]

In their words

" [Quote] "
[Name], [title], [School name]

What is next

[What the school is doing next, for example adding career guidance or switching on more services.]

Approval: approved for publication by [name, title] on [date]. Channels approved: [website / proposals / social media / events].

Testimonial request

Email and consent, English and Arabic

Send after the end-of-term review, only if the results were good and the school is happy. Attach the draft case study so they see exactly what would be published.

Email (English)

Subject: A short quote about your Horizon pilot?

Dear [Name],

Thank you for running the Horizon pilot with us this term. Your team's results, for example [one result, such as school letters in X days instead of Y], are exactly what we hoped to show.

Would you be willing to share two or three sentences about the pilot that we may quote? A few questions that may help:

1. What was the problem before Horizon?
2. What changed for your staff or families?
3. Would you recommend it to another school, and why?

I have attached a draft case study built only from your school's own figures. Nothing is published until you approve the final wording, and you can withdraw your permission at any time.

With thanks,

[Your name]

Nexus AI Assurance FZCO

البريد الإلكتروني (العربية)

الموضوع: هل تتفضلون بكلمة قصيرة عن تجربة Horizon؟

حضرة [الاسم] المحترم/المحترمة،

نشكركم على تطبيق التجربة الأولى لمنصة Horizon معنا هذا الفصل الدراسي. لقد جاءت نتائج فريقكم، مثل [نتيجة واحدة، مثلاً إصدار الخطابات المدرسية خلال X أيام بدلاً من Y]، كما كنا نأمل تمامًا.

هل توافقون على مشاركتنا جملتين أو ثلاثاً عن التجربة يمكننا اقتباسها؟ قد تساعدكم هذه الأسئلة:

1. ما المشكلة التي كنتم تواجهونها قبل Horizon؟
2. ما الذي تغير بالنسبة إلى الكادر أو الأسر؟
3. هل توصون بها لمدرسة أخرى، ولماذا؟

أرفقنا مسودة دراسة حالة مبنية فقط على أرقام مدرستكم. لن يُنشر أي شيء قبل موافقتكم على الصيغة النهائية، ويمكنكم سحب موافقتكم في أي وقت.

مع خالص الشكر،

[اسمك]

Nexus AI Assurance FZCO

Consent wording (English)

I, [name], [title] at [School name], agree that Nexus AI Assurance FZCO may publish the quote and case study attached, as approved by me on [date], in the following places: [website / proposals and presentations / social media / events].

- The school's name and logo may be used: [yes / no].
- My name and title may be used: [yes / no / title only].
- No student, parent or staff personal data, and nothing from wellbeing or safeguarding records, will be published.
- I may withdraw this consent at any time by writing to [email]. Nexus AI Assurance FZCO will then remove the material from channels it controls within [number] days.

Signature: _____ Date: _____

صيغة الموافقة (العربية)

أنا [الاسم]، [المسمى الوظيفي] في [اسم المدرسة]، أوافق على أن تنشر شركة Nexus AI Assurance FZCO الاقتباس ودراسة الحالة المرفقين، بالصيغة التي اعتمدتها بتاريخ [التاريخ]، في الأماكن التالية: [الموقع الإلكتروني / العروض والمقترحات / وسائل التواصل الاجتماعي / الفعاليات].

- يجوز استخدام اسم المدرسة وشعارها: [نعم / لا].
- يجوز استخدام اسمي ومسماتي الوظيفي: [نعم / لا / المسمى الوظيفي فقط].
- لن تُنشر أي بيانات شخصية للطلاب أو أولياء الأمور أو الكادر، ولا أي شيء من سجلات الرفاه أو حماية الطفل.
- يحق لي سحب هذه الموافقة في أي وقت بالكتابة إلى [البريد الإلكتروني]، وعندها تزيل Nexus AI Assurance FZCO المواد من القنوات التي تديرها خلال [عدد] أيام.

التوقيع: _____ التاريخ: _____

HORIZON SALES KIT

Meeting kit: the live school meeting

Before, during and after the live meeting

One checklist for a 45 to 60 minute meeting with a school leadership team. Production:

<https://myhorizon.up.railway.app>

1. Before the meeting

The day before

- ☐ Ask the school for an anonymised staff list or one class list (names may be made up; real emails not needed). Send them the Import center templates or the sample files in `samples/`.
- ☐ Fill the blanks in `pilot-proposal.md` that you already know (school name, date). Print one copy, plus `data-protection-pack.md` for the IT lead.
- ☐ Check the daily live check (it runs at 06:45 Dubai time for every role in English and Arabic) passed that morning, and that the public status page (`/status`) shows all checks up.

30 minutes before

- ☐ The production URL loads, and `/demo` shows the persona cards.
- ☐ Enter as any persona and press **Reset demo** in the yellow bar (under a minute). Every record is restored with dates relative to today.
- ☐ Two browser windows side by side: one normal, one private (each window holds one signed-in persona).
- ☐ Optional: switch the second window to Arabic to show right-to-left.
- ☐ Environment checks, only for what you plan to show:
 - Real emails: the email delivery key and sender address are set on the web and worker services. Without them, emails go to the server log only.
 - AI drafts: the AI provider key is set. Without it the built-in drafter still works; say "this is the offline drafter".
 - Single sign-on with the school's work accounts: the sign-in keys are set, so the login page shows those buttons. School admin > Invitations > How people sign in shows which methods are ready on the server. Demo personas need no password.
 - Phone app alerts: the push keys are set; otherwise the alert option is hidden in Settings.
 - WhatsApp: the demo uses the console provider (messages are logged, not sent). Say so if you show the parent opt-in.
- ☐ Sample files ready on the laptop: `samples/staff-sample.csv`, `samples/students-guardians-sample.csv`, `samples/classes-sample.csv`, `samples/enrollments-sample.csv`.
- ☐ Phone charged, with the demo open, to show the mobile view.

2. The live import moment (5 minutes)

The point: "your data is in Horizon in minutes, and nothing is saved until you have seen it".

1. Enter as **Aisha Rahman** (School Administrator). Open **School admin > Import center**.
2. **Staff**: upload `staff-sample.csv` (or the school's anonymised list). Leave sending invitations off. Show the preview: one row per person with roles, department and subjects; every row says create. Confirm.

3. **Students and guardians:** upload `students-guardians-sample.csv` . Point out the Arabic names and that two siblings share one guardian. Confirm.
4. **Classes and enrollments:** upload `classes-sample.csv` , then `enrollments-sample.csv` . Confirm each.
5. Upload the staff file again: every row now says unchanged. "Re-importing never creates duplicates and never removes anyone's access."
6. Optional: change one email in a copy of the file to something invalid and upload it to show the row-level error.

Notes:

- The sample files use section **S** so they never merge with the demo school's own classes (lettered A, B and onwards). A school's own file that uses the same grade, subject and section as a demo class may update that class; press **Reset demo** afterwards in any case.
- The importer reads CSV or XLSX, English or Arabic headers, and files saved by older Arabic spreadsheet software.
- Never upload real personal data into the demo school.

What the sample files contain (all fictional): 8 staff (teachers, a head of science, a counselor, a registrar, a nurse), 12 students in grades 9 and 10 with 11 guardians, 4 classes (one homeroom) and 19 enrollments.

3. The five-minute demo path

Switch personas with the yellow bar. Show the parent in Arabic if the audience is Arabic-speaking.

Time	Persona	What to show	Line to say
0:00	Rania Nasser (Parent)	Services > Request a school document: Adam, enrollment letter, bilingual, purpose embassy. Submit; show the progress view.	"No phone call, no visit, and she can see where it is."
0:45	Registrar	Approvals > approve with a signature.	"One inbox for every approval."
1:15	Rania Nasser	Notification, then Documents > open the PDF: English and Arabic side by side, the school's logo.	"Arabic is shaped correctly, not reversed."
1:45	Daniel Carter (Teacher)	Safeguarding > raise a concern. After submitting he sees only "Received and being handled".	"The teacher cannot read the case. That is the point."
2:30	Khalid Yousef (DSL)	Restricted queue, chronology, the recorded decision about telling the family, the audit tab.	"Families are never told automatically. Every view is logged."
3:30	Omar Al Mansoori (Principal)	Home KPIs, then Analytics: time to close, share within target.	"Wellbeing and safeguarding are excluded from every figure."
4:15	Aisha Rahman (Admin)	Workflows (visual route, validate, simulate) or Compliance (AI safeguards, retention, data requests).	"Your team changes forms and routes; you do not wait for us."

If there is more time, by audience:

- **Counselors:** Sarah Ahmed: a referral in her caseload, versioned notes, book a meeting with the parent.
- **Career and university staff:** Adam Nasser: career assessment and matches; then Layla Hassan: AI brief (draft, review before use), action plan, approve and share. University planning: requirements per programme with the official source.
- **IT lead:** Roles and access > Access check on a teacher; Audit log with CSV export; Compliance > processors and AI switches; Integrations (API keys with scopes, the scheduled sync and its run history, the API guide); Compliance > Person data tools (one-person export and erasure preview).

- **Principal or inspection lead:** Omar Al Mansoori: Inspection evidence pack for this term (PDF and CSV), then Analytics > Pilot measures.
- **Group leaders:** Noura Al Suwaidi (Group Director, on /demo): Group dashboard comparing three schools, then Shared templates.
- **Parents on a phone:** Rania Nasser: install Horizon to the home screen, turn on app alerts in Settings, download Adam's career report (PDF). Show University fairs and visits and register Adam for one.

4. Objections and answers

"Do you connect to our SIS?"

Yes, three ways, all with the same validation and no duplicates:

1. **Import center:** staff, students with guardians, classes and enrollments, as CSV or XLSX with English or Arabic headers, previewed before anything is saved.
2. **Scheduled sync:** if your system can publish an export to an HTTPS address, Horizon reads it hourly or daily with the column mapping you set, keeps a run history and alerts administrators after repeated failures.
3. **Horizon API:** your system or IT team pushes and reads students, staff, classes, enrollments and attendance with a school API key (scoped per area, revocable, rate limited). The API guide and OpenAPI file are in School admin > Integrations.

A ready-made connector for a specific SIS product is not built; the school's supplier points its export or API calls at Horizon.

"Where is data hosted?"

[hosting region]. Each school's data is separated by database row level security, the app runs as a non-owner database role, identity numbers are encrypted at field level, and every file download is a signed link that expires in five minutes. The data protection pack has the detail and the processor list.

"What about our existing career guidance provider?"

Keep them. Horizon does not replace partners; it can link partner providers. Under Career > Partner resources, the career team lists partner links for students and parents and sees how often they are opened (no personal tracking). Staff record a referral to an outside provider on the student's case (provider, reference number, contact), the school can add a service in the catalog that routes a request to the partner's process, and documents from the partner can be shared with the family. If you prefer, switch the career module off and use Horizon only for operations. Direct data exchange with a partner's own platform: [to discuss].

"Our safeguarding records cannot leak."

One access module controls every wellbeing and safeguarding record. They are excluded from search, dashboards, analytics and family portals; referrers see status only; emergency access is time-limited, reasoned and alerts the DSL; every view is in the audit log.

"How do we prepare for inspection?"

The Inspection evidence pack gathers, for a chosen period, the figures inspectors commonly ask about (safeguarding, wellbeing and counseling, parent communication, careers guidance, attendance and academics, policies and compliance records), with the related framework areas noted for the school to check against its current framework. It downloads as a bilingual PDF on the school letterhead or CSV, with no case details.

"What about AI and student data?"

AI is optional and can be switched off. Wellbeing, safeguarding and medical data is never sent unless the school turns it on with a recorded reason. Every AI output is a draft a person approves.

"We do not have time to set this up."

A new school starts complete: services, forms, approval routes, letters, roles, calendar with UAE holidays. Setup is one 90-minute session, and the import takes minutes, as you just saw.

"Will parents use it?"

Parents join by email invitation or a family join code on a printed poster with a QR code. It works in the phone browser

in Arabic or English, and parents can install it on the home screen like an app (no app store download) and turn on alerts. Where the school enables it, they can also choose WhatsApp messages. Parent adoption is one of the pilot success measures, and the Pilot measures panel shows it at any time.

"What does it cost?"

[price per student] per year. The public /pricing page has a time-saved estimator with every assumption shown and editable; it shows "Request an offer" until prices are published. The pilot fee is [pilot fee], and if the agreed success measures are not met at the end-of-term review, the school pays no pilot fee.

"What if we stop?"

Exit with [notice period] notice. Your administrator can export all school data at any time (CSV per table and every document) from Compliance > School data export. We then delete your data and confirm in writing.

5. Next steps (agree before leaving)

- ☐ Pilot sponsor and pilot lead named.
- ☐ Five launch services chosen (default: documents, absences, parent meetings, teacher referrals, safeguarding concerns).
- ☐ Success measures and targets agreed (see the pilot proposal).
- ☐ Data protection pack sent to the IT or data protection lead; questions by [date].
- ☐ Data request sent: staff, students and guardians, classes and enrollments, calendar, logo and colours, letter wording, DSL and deputy.
- ☐ Setup day booked: [date].
- ☐ Pilot proposal signed by [date].
- ☐ After the meeting: press **Reset demo**, send a thank-you email with the proposal and the data protection pack.

Advisor outreach

Inviting a respected UAE educator

For inviting a respected UAE school counselor, safeguarding lead or former principal to advise Horizon. Keep it personal: one person, one reason why them.

Message (email or direct message)

Subject: Would you advise us on Horizon?

Dear [Name],

I am [your name], founder of Horizon, a School Operations and Student Services platform built for UAE schools, in English and Arabic. It handles the everyday procedures between families, students and staff: letters, absences, meetings, referrals and safeguarding concerns, with a career and university planning module alongside.

I am writing to you because of [specific reason: your work on student wellbeing at ..., your years leading ..., your talk on ...]. The parts of Horizon that matter most to schools, safeguarding and counseling, are the parts where we most need the judgment of someone who has done the job.

Would you consider joining us as an advisor? In short:

What we would ask of you

- About [hours] a month: a short call to review what we are building and tell us where it is wrong.
- A review of our safeguarding and counseling flows before they go to a new school.
- Your permission to list you as an advisor [and quote you], with wording you approve.
- Optional: an introduction to schools where you think Horizon would help, only if you are comfortable.

What you would get

- [Advisor terms: fee / equity / none, to confirm].
- Early access to every new module, and a direct line to shape it.
- Credit on our website and materials, with your approval.
- [Other terms].

You can see the product working here first, no sign-up needed: <https://myhorizon.up.railway.app/demo>

Could we have a 20-minute call in the next two weeks?

With thanks,

[Your name]

Founder, Horizon

Nexus AI Assurance FZCO

Before you send

- ☐ Personal reason filled in. No generic version.
- ☐ Advisor terms decided: [fee / equity / none], [term length], [notice].
- ☐ Short advisor agreement ready, with confidentiality and the listing or quote wording: [agreement]. Never list or quote an advisor before they approve the exact wording in writing.

Referrals and school groups

The referral offer and the group pitch

Part 1: The referral offer for schools

How it works

1. Every Horizon school has its own 8-character referral code and a ready sign-up link, under School admin > Refer a school (administrators and the principal).
2. The school shares the code or link with another school (a principal they know, a sister school, a schools network).
3. When the referred school signs up through the link, Horizon records which school referred it. When it signs its pilot proposal or contract, both schools receive the reward below.

The app records the referral; it applies no discount by itself. Rewards are agreed and applied by the Horizon team under the terms below.

Terms (to confirm)

Term	Value
Reward for the referring school	[reward, for example a discount or credit]
Reward for the new school	[reward]
When the reward applies	[for example, when the new school's first invoice is paid]
Limit per school per year	[limit]
Code valid until	[date]
Excluded cases	[for example, schools already in talks with Horizon, schools in the same group]

Short text a school can forward

We use Horizon for our school procedures (letters, absences, meetings, referrals and safeguarding concerns) in English and Arabic. If you would like to see it, start through our link [referral link, from School admin > Refer a school], or contact Nexus AI Assurance FZCO on +971 52 377 7246 and quote our code [code]. [New school reward line.]

Part 2: One-page pitch for school groups

Horizon for school groups

One platform, every school in the group, each school's data kept apart.

Every school in the group gets its own Horizon tenant: its own staff, families, records and settings, separated from the other schools by database row level security. Group leaders get consistency without any school seeing another school's records.

What a group gets today

- **One setup per school, the same starting point.** Every new school starts from the same complete configuration: services, forms, approval routes, bilingual letters, message templates, roles, UAE calendar. Each school then runs one 90-minute setup and imports its own staff and families.
- **One sign-in for people who work across schools.** A person invited to several schools switches between them with the school switcher, with the right role in each.
- **Each school keeps its own identity.** Logo, colours, names, letterhead and seal on every letter and report card.
- **Group-wide safeguards by design.** In every school, wellbeing and safeguarding records never appear in dashboards or analytics, and every view of a sensitive record is audited.
- **Comparable figures.** Every school's Analytics page reports the same measures (requests, time to close, share within target, meetings held), so results can be compared school by school.
- **Group dashboard.** Group leaders sign in to one page with totals and a school-by-school comparison: open requests, turnaround, overdue work, parent meetings, service usage, setup status, active users, and university plans and applications by stage. It works on a phone. Wellbeing, safeguarding, confidential and medical work is excluded entirely, not even counted.
- **Shared templates.** A group administrator shares a service (with its form and approval route), a letter or a notification message from one school to the other member schools. Each school receives its own copy, switched off until it is ready, and the group keeps a history of what was shared.
- **Clear joining and roles.** A school joins the group with a single-use code from the group, after its own administrator has seen what the group can and cannot see. Group roles are administrator or viewer (for example, a board member). A group role gives no access inside a school's records.

Commercial terms (to confirm)

- Group pricing: [price per student, group rate].
- Pilot: [one school first / several schools in parallel].
- Group contract and data processing agreement: [one agreement for the group / one per school].

Talking about ROI

Time saved, measured in the pilot

Rule one: never quote a saving the school has not confirmed. Every number below is an assumption the school fills in, and the pilot then measures what actually happened.

1. Where the time goes today

Ask the school to estimate each line in week 1 (a quick count over one normal week is enough).

Category	What staff do today	What Horizon changes	Assumption to confirm
School documents and letters	Take the request by phone or at reception, check details, type the letter, get a signature, call the parent	Parent requests online; the letter is generated in English and Arabic from a template; approval with a signature in one inbox; parent notified	[minutes per letter today], [letters per month]
Absence reports	Answer calls and emails, write them down, pass them on	Parent reports online; it goes to the right person with a 24-hour target	[minutes per absence], [absences reported per month]
Meeting booking	Emails back and forth to find a time	Parent picks a free slot; confirmation and reminders are automatic	[minutes per meeting booked], [meetings per month]
Teacher referrals	Emails or paper forms, chasing who has it	One form, routed to the right person, tracked to closure	[minutes per referral], [referrals per month]
Safeguarding records	Notes in several places; assembling a chronology by hand	One restricted record with the chronology built as you go, exportable by the DSL	[hours per chronology], [cases per term]
"Where is my request?" calls	Reception looks it up and calls back	Families see each step themselves	[calls per week], [minutes per call]
Data entry at the start of a year	Typing staff and student lists into new tools	Import center from existing spreadsheet exports	[hours today]

Staff cost per hour: [the school's figure, or leave out and talk in hours].

The public /pricing page has the same kind of estimate as a calculator (letters, absence reports, meeting booking and parent messages, with staff cost per hour). Every assumption is labelled and editable; use the school's own figures, and say it is an estimate, not a promise.

2. How to work it out

For each category:

$$\text{hours saved per month} = (\text{minutes today minus minutes with Horizon}) \times \text{volume per month} / 60$$

Take "minutes with Horizon" from the pilot, not from us. Talk in staff hours first; money only if the school wants it, with its own hourly cost.

Beyond time, name the benefits the school cares about, without putting a number on them unless the school does:

- Fewer missed targets (share of requests closed within target).
- A clear record for inspections and audits (audit log, recorded decisions).
- Safeguarding handled the same way every time.
- A better experience for families in Arabic and English.

3. How the pilot measures it

What	Where in Horizon
Volume per service	Analytics: Requests by service (last 7, 30 or 90 days)
Time to close	Analytics: Average time to close; Slowest services (average hours per service); Time to close, week by week
Share within target	Analytics: Service levels, Within target
Letters issued	Analytics: Guidance and letters, Letters issued
Meetings held as booked	Analytics: Service levels, Meetings held
Staff actually using it	Analytics: Pilot measures, Staff active (any period, CSV download)
Parent adoption	Analytics: Pilot measures, Parent adoption
Median days to issue a letter	Analytics: Pilot measures

Minutes per task with Horizon are not tracked by the app. Ask two or three staff to time a handful of tasks in week 6 and again at the end of term.

4. What to say in the meeting

- "We will not give you a savings figure. We will measure yours."
- "Tell us how long a letter takes today and how many you issue. At the review you will see the real number next to it."
- "If the agreed measures are not met, you do not pay the pilot fee."
