

Horizon School OS

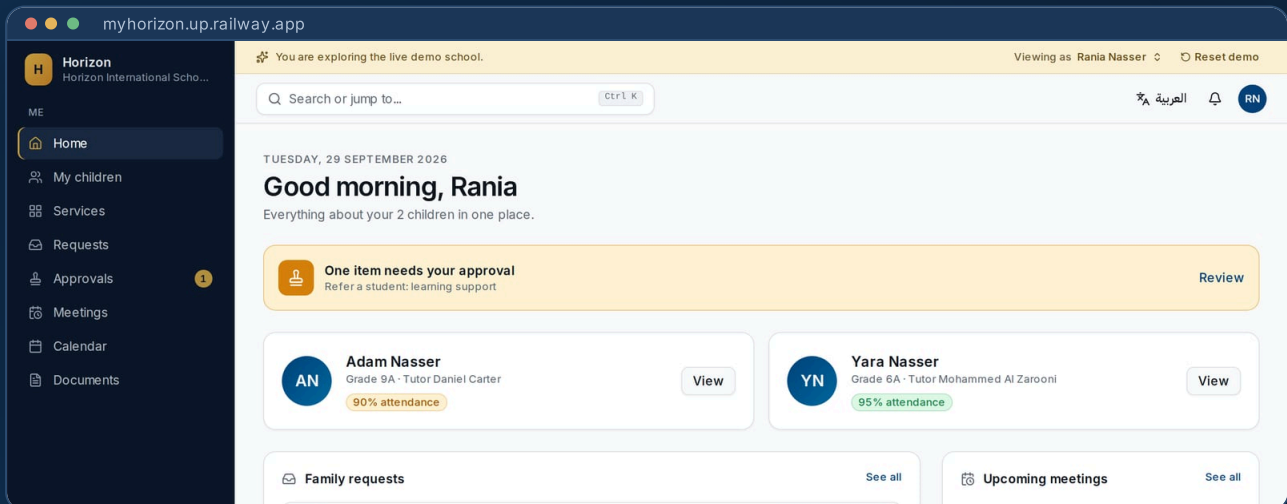

School operations and student services, in Arabic and English

COMPLETE FEATURE GUIDE

One portal for every school procedure

بوابة واحدة لكل إجراءات المدرسة

A guide for principals, owners, IT leads and safeguarding leads at UAE private schools. It covers what Horizon does, how it differs from the tools most schools use today, and how a pilot runs.

TRY THE LIVE DEMO

<https://myhorizon.up.railway.app/demo>

Every person and record in the demo school, Horizon International School Dubai, is fictional.

Contents

01	The problem schools have	3
02	What Horizon is	4
03	How we are different	5
+	Academics, university planning and self-serve setup	9
04	Horizon compared with the alternatives	12
05	Five end-to-end journeys	13
06	Portals by role	15
07	Full feature catalog	17
08	Security and trust architecture	20
09	Implementation and rollout	21
10	Next steps and the live demo	22

WHO THIS IS FOR

- **Principals and owners:** one place to see how every procedure is running, with service levels and a full audit trail.
- **IT leads:** tenant isolation in the database, single sign-on with Google or Microsoft, CSV import, signed file links.
- **Safeguarding leads:** a restricted queue, recorded family decisions, break-glass access with alerts and a view log on every sensitive record.
- **Counselors and registrars:** caseloads, versioned notes, approvals with signatures and bilingual letters in minutes.

AT A GLANCE: WHAT SHIPS IN THE PRODUCT TODAY

29

ready-made services in 11 categories, each with its own form and workflow

21

form field types, from short text to signature, consent and student picker

13

workflow step types, including approvals, conditions, waits, meetings and letters

14

system roles built on 63 fine-grained permissions, plus roles the school creates

2

full languages, Arabic and English, with right-to-left layout on every screen

8

role-based home dashboards, from student and parent to DSL and principal

45

statement career aptitude assessment across nine strengths, matched to 47 careers

1

access module that every wellbeing and safeguarding record passes through

Counts describe the configuration shipped with the demo school. Schools add, edit and retire services, forms, workflows and letter templates themselves.

School procedures live in too many places

A subject change, a visa letter, a worried teacher, a parent who wants a meeting. Each one is simple on its own. Together they run across inboxes, paper forms, WhatsApp groups and spreadsheets, and nobody can see the whole picture.

Procedures are scattered

Requests arrive by email, printed form, phone call and WhatsApp message. Each office keeps its own spreadsheet. A parent asking "where is my letter?" is answered by whoever happens to remember.

Approvals are slow and invisible

A request that needs a teacher, a head of department and the registrar waits in three inboxes in turn. Nobody knows which step it is on, and there is no agreed turnaround time to measure against.

There is no audit trail

When an inspector, a parent or the board asks who approved something and when, the answer is spread across forwarded emails and chat screenshots. Decisions are hard to evidence.

Sensitive matters are handled informally

Wellbeing and child protection concerns are passed on in corridors, personal notes and group chats. Access is not controlled, views are not logged and decisions about telling the family are not recorded.

Arabic is an afterthought

Many systems are built in English first. Arabic screens are partial, layouts break right to left, and official letters in Arabic are retyped by hand, with shaping errors that families notice.

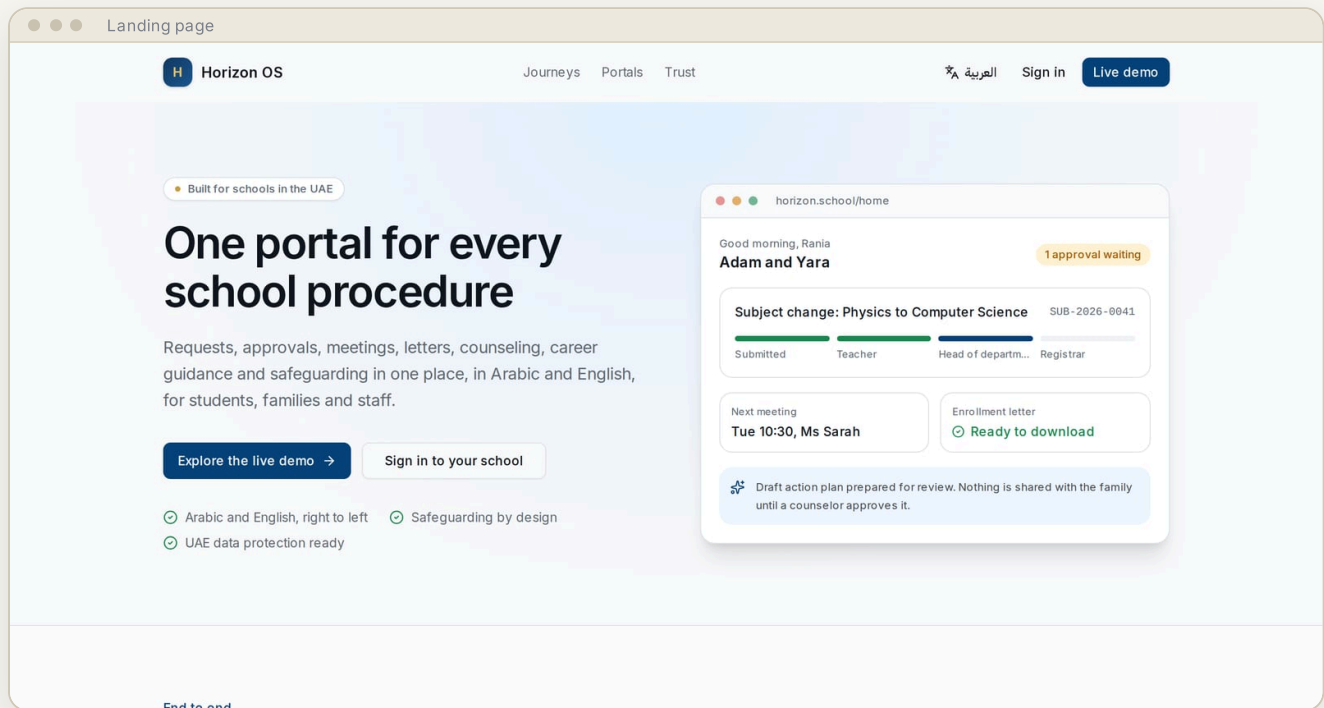

Student services sit outside the system

Counseling, career guidance and learning support rely on separate tools or none at all. Leaders cannot see caseloads, response times or whether follow-ups happened.

The result: staff time lost to chasing, families left guessing, and leaders unable to show regulators how procedures actually run.

One bilingual portal for students, parents and staff

Horizon brings every school procedure into one place. Families and students ask for things through simple forms. The school decides how each request is routed, approved and completed. Everyone can see where things stand, in Arabic or English.

Services and requests

A catalog of school services. Each request has a number, a live progress stepper and a target turnaround.

Approvals

Sequential or parallel approvals with typed signatures, comments and a recorded decision trail.

Meetings

Booking against real staff availability, with calendar invites and reminders.

Letters and documents

Official letters generated in English, Arabic or both, and a document library with versions and family sharing.

Cases

Counseling, academic, behavior, learning support and career cases with notes, tasks and action plans.

Safeguarding

A restricted route for child protection concerns that goes straight to the designated safeguarding lead.

Career guidance

An aptitude assessment, matched careers, a career explorer and a university shortlist.

Calendar

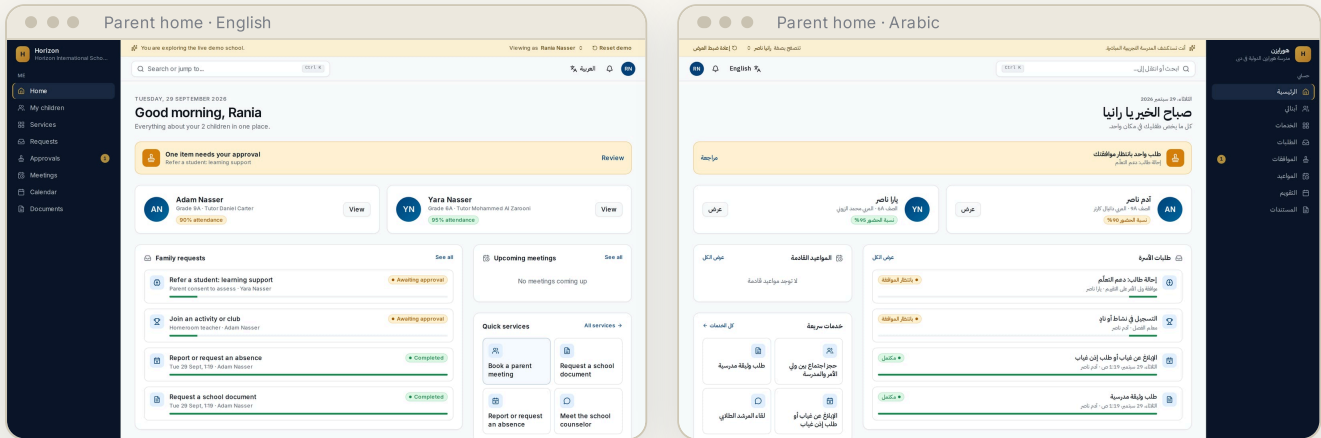

Meetings, tasks, events, deadlines and follow-ups in day, week, month and agenda views.

Analytics

Volumes, time to close and service levels, with sensitive cases always excluded.

1. Arabic-first and truly bilingual

Every screen, email, notification and letter exists in Arabic and English. Switching language flips the whole interface to right to left, not just the words.

The same page for Rania Nasser (parent) in English and Arabic. Navigation moves to the right, progress bars fill from the right and every label is translated. Layouts use logical start and end spacing throughout, so nothing is mirrored by hand.

What bilingual means in Horizon

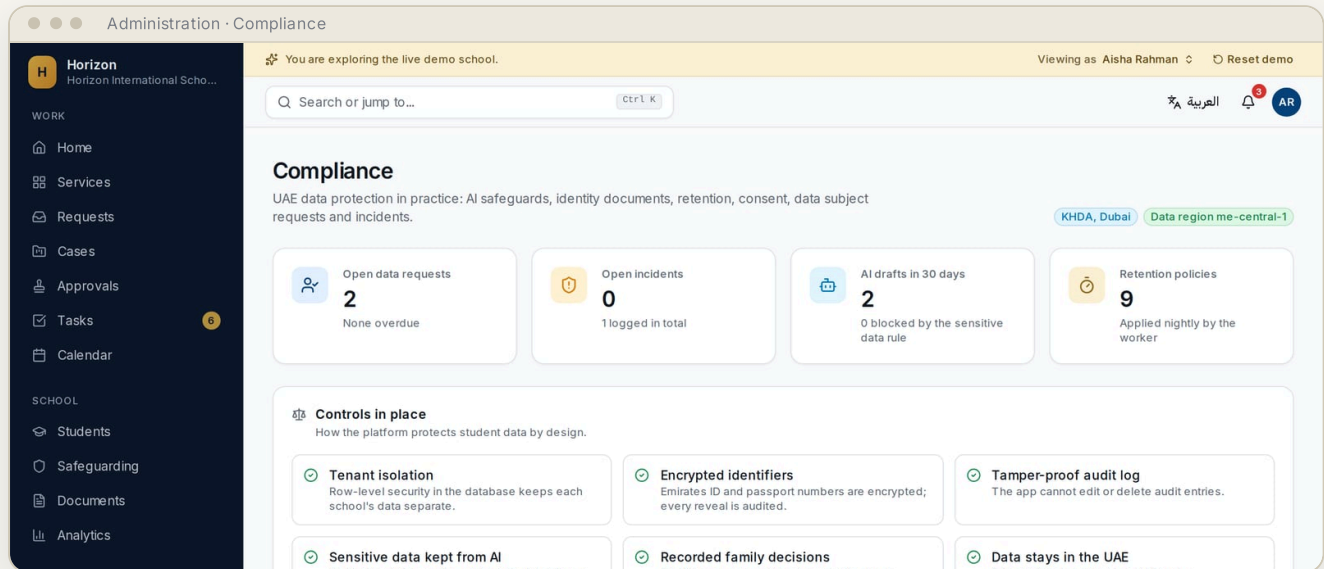

- **Full right-to-left layout** for Arabic on desktop and mobile, checked at phone width with no sideways scrolling.
- **Per-person language choice**, also used for the emails the school sends that person.
- **Arabic-Indic or Western digits**, set as a school default and changeable by each member.
- **Hijri dates** shown next to Gregorian dates when the school enables them, and printed on official letters.
- **Bilingual content**: service names, form questions, options, workflow step labels, messages and letter templates are all stored in both languages.
- **Bilingual PDF letters** with correct Arabic letter shaping and bidirectional text, so names, numbers and dates read correctly inside Arabic sentences.
- **Arabic keyword support** in the AI drafting helpers for forms and workflows.

Enrollment confirmation letter generated from a template: English and Arabic side by side, reference number, Gregorian and Hijri dates, and the registrar as signatory.

2. UAE compliance built in

Horizon is designed around the obligations of a UAE private school: Federal Decree-Law No. 45 of 2021 on personal data protection (PDPL), Federal Law No. 3 of 2016 on child rights (Wadeema's Law), and the expectations of the emirate regulator.

The compliance page shows the regulator and data region, open data requests, incidents, AI drafts and retention policies, and a live check of each built-in control.

Regulator setting

Each school records its regulator (KHDA, ADEK, SPEA or the Ministry of Education) and emirate in School setup.

Data residency

The data region is recorded per school. Cross-border transfers are off by default and each service provider is listed with its safeguards and an explicit approval.

Identity documents

Emirates ID and passport numbers are encrypted (AES-256-GCM). Only the last four digits are stored in clear, and every reveal is audited.

Retention

Retention policies per record type (review, anonymize or delete) run nightly. Safeguarding records are only ever reviewed, never removed automatically.

Consent and purposes

Processing purposes with their lawful basis, and consent records per student and guardian.

Data subject requests

Access, correction and deletion requests tracked with due dates, overdue flags and recorded resolutions.

Incident log

A breach and incident register with severity, dates and reporting status.

Wadeema's Law duties

Any staff member can raise a child protection concern in minutes, and it reaches the safeguarding lead immediately.

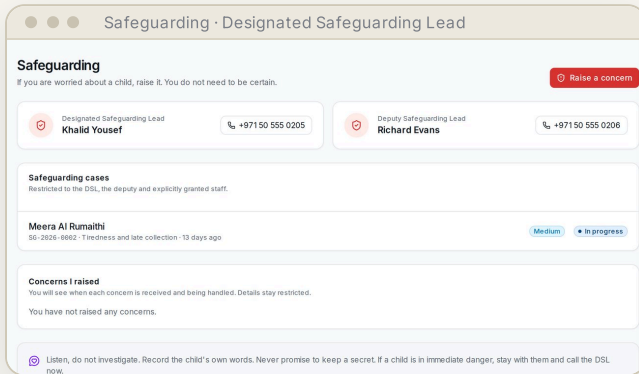

Evidence on demand

An append-only audit log with CSV export, and a PDF chronology export for safeguarding cases (DSL only).

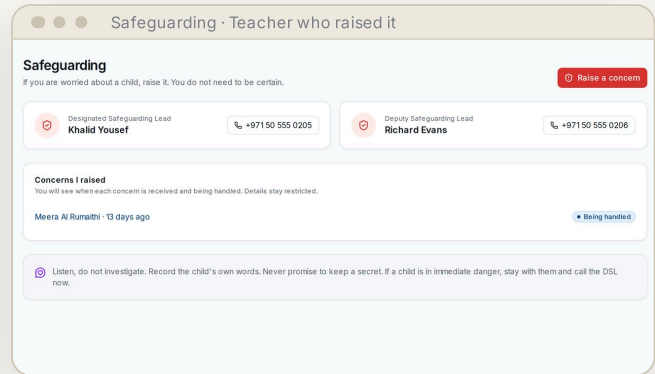

This is a summary of product controls for school leaders and IT, not legal advice. Schools should confirm retention periods and registration duties with their regulator and advisers.

3. Safeguarding by design

Wellbeing and safeguarding records are not ordinary data with a lock added later. Every access passes through one access module, and the rules are enforced in the product, not left to good habits.

Khalid Yousef (DSL) sees the restricted queue with level and status.

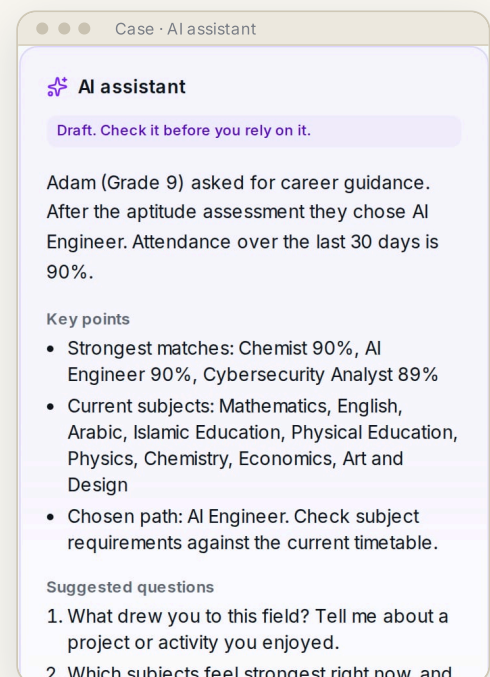

Daniel Carter (teacher) sees only that his concern is "Being handled".

- **Referrer sees status only.** Details and outcomes stay restricted.
- **DSL-only queue.** Only the DSL, the deputy and explicitly granted staff can open safeguarding cases.
- **Break-glass access** needs a reason, lasts 60 minutes, alerts the DSL and is audited.
- **Time-limited access grants** with a reason, shown on the case.
- **Families are never told automatically.** Each decision to notify, defer or not notify is recorded with a reason.
- **Every view is audited,** and sensitive cases never appear in search, dashboards or analytics.

4. AI with guardrails

Horizon uses AI to save staff time on the writing, never to make decisions. Every AI call goes through one provider module that applies the school's rules.

- **Drafts only.** Case briefs, action plans, referral wording, form and workflow drafts and analytics answers are labelled as drafts. A person marks them as right or discards them.
- **Human approval before anything is shared.** An AI action plan becomes tasks for the student, and an update for the family, only after the counselor or advisor approves it.
- **Sensitive data stays out by default.** Wellbeing, safeguarding and medical details are never sent to the AI provider unless the school switches this on with a documented reason, which is written to the audit log.
- **Aggregates only for analytics.** Questions about operations are answered from the summary figures, with no student records shared.
- **Works without an AI provider.** If no provider is configured, built-in drafters still produce briefs and starting drafts from the record. Schools can also switch AI drafting off entirely, and every AI request, including blocked ones, is logged.

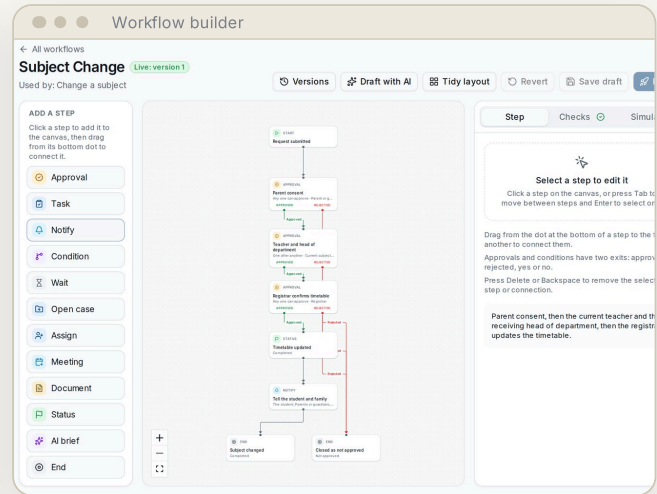

A pre-meeting brief for a career case, marked as a draft, with "Looks right" and "Discard".

5. The school configures it, not the vendor

Forms, approval routes, letters and the service catalog are edited by the school's own administrators, in the browser, with no code.

Drag-and-drop form builder: 21 field types, multi-step forms, sections, show-if conditions, prefill from the student record, preview, and versioned publishing.

- **Versioned publishing.** Publishing creates a new immutable version. Requests already in progress keep the version they started on.
- **Safeguarding routing guard.** A safeguarding workflow must route to the DSL, deputy or case owner and cannot notify the student or family. The builder only offers those choices and checks again on publish.

Visual workflow builder: 13 step types, live checks that block publishing a broken route, a dry-run simulator, and version history.

- **Letter templates with live preview.** Edit the English and Arabic text, insert merge fields such as student name, grade and purpose, and preview the real PDF.
- **Service catalog.** Set audience, category, form, workflow, meeting type, sensitivity and target turnaround for each service.

6. Student services, not just administration

Horizon treats counseling, career guidance and family meetings as first-class work, with the same tracking as any administrative request.

- **Counseling cases** with nine tabs: overview, timeline, appointments, tasks, documents, forms, communications, people and audit log.
- **Versioned notes.** Every entry is timestamped with its author. Notes can be amended with a reason, earlier versions are kept, and nothing can be deleted.
- **Action plans** with owners and due dates that turn into tasks.
- **Career guidance** with an aptitude assessment, matched careers with reasons, and advisor review before families see recommendations.
- **Parent meetings** booked against real availability, not by email back and forth.

7. One platform instead of five tools

Many schools combine a student information system, an online form tool, a shared inbox, a booking tool and a messaging app. Horizon replaces the procedural part of that stack with one system that shares one set of people, permissions and records.

One login, one record, one audit trail. A request, the meeting it leads to, the case it opens, the letter it produces and every decision along the way are linked and visible to the right people.

Timetables, cover, grades, curriculum and university planning are built in (pages 9 to 11). Fees stay in the school's finance system. Student and family records are brought in by CSV import.

8. The school day, in one engine

The spreadsheets and phone calls behind every school day, replaced by modules that share one set of students, staff and classes, in Arabic and English.

Subject registration

- Students and parents choose options by block; staff approve.
- Classes fill automatically within capacity, with option-block and prerequisite checks.
- Replaces the option-blocks spreadsheet and manual class lists.

Timetable and automatic cover

- Teachers placed in their subjects; bell times, rooms and week view.
- A teacher reports an absence; the system finds a free teacher from the right department, assigns the lesson and notifies them.
- Exam schedules with clash checks.

Grades and report cards

- A spreadsheet-style gradebook with Excel paste and autosave.
- Weighted averages and grade bands per curriculum.
- Students and parents see published grades; bilingual report card PDFs.

Curriculum and lesson plans

- Frameworks and standards imported from a document.
- Unit and lesson plans with materials, differentiation and review by the head of department.
- Coverage map that shows gaps before inspection.

Calendar and trips

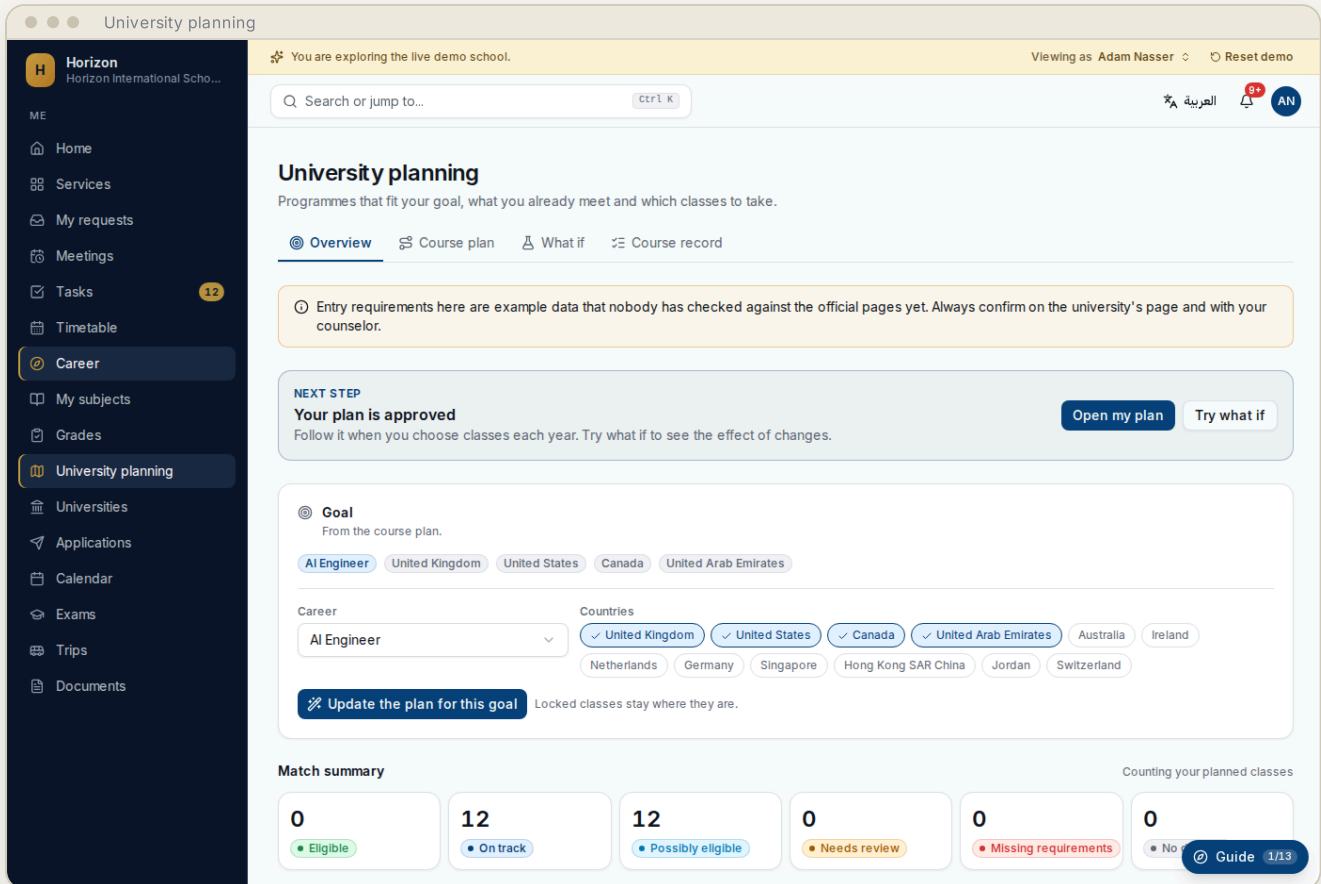

- A school calendar the school edits: terms, UAE holidays, events by grade.
- Trip letters in both languages with online parent consent.
- Everything appears on each family's own calendar.

Connected on purpose

Grades suggest predicted grades for university planning. Registrations fill the timetable. Absences create cover. Trips and exams reach every family's calendar without anyone copying them.

9. University planning from Grade 9

A student says "I want to become an AI engineer, maybe in the UK, the US or Canada". Horizon shows matching programmes, what they already meet, what is missing and which classes to take, and turns it into a plan the counselor approves.

- **256 programmes at 92 universities** in the UK, US, Canada, UAE, Jordan, Australia, Ireland, the Netherlands, Germany, Singapore and Hong Kong.
- **8 curricula understood:** American, British, IB, UAE MoE, Jordanian Tawjihi, CBSE, ISC and SABIS, each mapped to common subjects and levels.
- **Deterministic checks.** Every requirement line is met, missing or unknown, with the course that satisfied it. AI never decides eligibility.
- **Classes that open the most doors** and a what-if mode: change a class or a predicted grade and see which programmes move.
- **A Grade 9 to 12 plan** built only from the classes the school offers, sent to the counselor for approval.
- **Every requirement shows its source and a confidence label.** A review queue and change monitor keep them current.

10. Applications, and a school that runs itself

Applications to the offer

- **Counselor board** of every application by stage, with filters for route, country, deadlines and missing items.
- **Deadlines become tasks and reminders** for UCAS, Common App, OUAC, UAE and Jordan routes. Each date shows where it came from.
- **Recommendation letters** land in the teacher's task list; students never see the letter.
- **Transcript import** from CSV, Excel or PDF, with each course matched to the curriculum and checked by the counselor.
- **Counselor dashboard:** plans waiting for approval, students missing requirements, and requirement changes that affect them.
- Parents follow their child's plan and applications read-only.

Self-serve from day one

- **Sign up** and the school is ready: services, forms, workflows, letters, roles, grade bands, bell times and the academic year with UAE holidays.
- **Setup wizard** for logo and colors, year and terms, curricula, modules to switch on, and people import.
- **Roles in plain words.** The principal grants or removes each permission, creates roles, and sees exactly what any person can do. Safeguarding access needs an extra confirmation.
- **Invitations** for staff by email, CSV or join link; families join with the school code and their child's details, approved by the school or matched automatically.
- **A printable QR poster** for families, in both languages.

Light maintenance by design. The requirement catalog refreshes itself weekly, the live site is checked every morning across every role in both languages, and every setting a school needs is in its own admin screens.

Horizon compared with the alternatives

How Horizon compares with the three approaches schools most often use for procedures today. The other columns describe what is typical for each category; individual products vary.

Capability	Horizon School OS	Typical student information system	Forms plus email and WhatsApp	Generic helpdesk tools
Arabic and English with full right-to-left layout	Yes, every screen, email and letter	Often partial Arabic	Depends on each tool	Usually translated labels only
Bilingual PDF letters with correct Arabic shaping	Yes, generated from templates	Sometimes, often English only	No, typed by hand	No
Hijri dates and Arabic-Indic digits	Yes, per school and per person	Varies	No	No
School-built forms with conditional logic	Yes, 21 field types, versioned	Limited	Yes, but disconnected from records	Basic ticket forms
Multi-step approvals with signatures	Yes: sequential, parallel all, parallel any, conditional	Limited, built-in flows only	No, approvals by reply	Single assignee, some approvals
Visual workflow builder with simulation	Yes	Rarely	No	Rules engine, no school concepts
Live request tracking for families	Yes, progress stepper and notifications	Rarely	No, families ask for updates	Ticket status for the requester
Target turnaround per service	Yes, tracked in analytics	Rarely	No	Yes, generic
Booking against real staff availability	Yes, with invites and reminders	Some, for parent evenings	No, arranged by message	No
Counseling and wellbeing cases	Yes, versioned notes and action plans	Pastoral notes in some	No	Not designed for it
Safeguarding: restricted queue, break-glass, recorded family decisions	Yes, one access module	Usually a separate product	No controls	No
Career guidance with aptitude assessment	Yes, matched careers and shortlist	Rarely	No	No
AI drafting with sensitive-data guard	Yes, drafts need human approval	Varies	No	Generic AI replies
UAE data protection controls (consent, retention, data requests, incidents)	Yes, one compliance page	Partial	No	Partial, not school specific
Append-only audit log with views of sensitive records	Yes, with CSV export	Partial	No	Change history only
Configured by the school without code	Yes	Often needs the vendor	Yes, but no routing	Yes, generic

Horizon is not a replacement for timetabling, grade books or fee billing, which usually stay in the student information system.

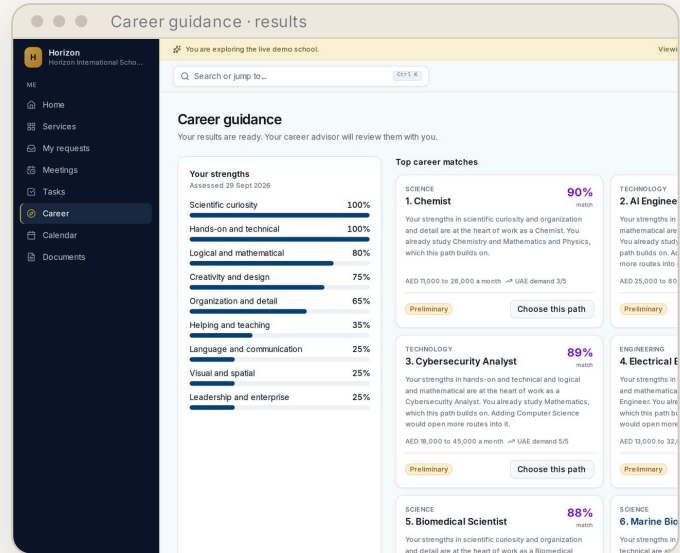

Every journey starts with a form and ends with a result

These five journeys run end to end in the live demo, in English and Arabic. Each step below is something a person does in the product.

Journey 1 · Career guidance

Adam Nasser (student) and Layla Hassan (career advisor)

- 1 **Adam** Takes the **career aptitude assessment**: 45 statements across nine strengths.
- 2 **Adam** Sees **top career matches** with the reasons, and chooses AI Engineer.
- 3 **Adam** Books the **career advisor** in a free slot and completes a short intake form.
- 4 **System** Opens a **career case** for Layla, with the request, meeting and results linked.
- 5 **Layla** Prepares an **AI meeting brief** and drafts an **action plan**, edits it and approves it.
- 6 **System** Creates **tasks** for Adam, completes the request and updates the family.

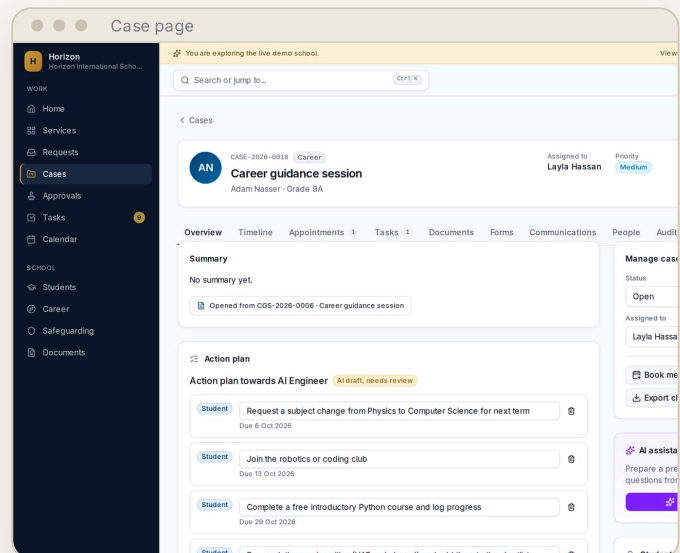

Strengths and matched careers, each marked preliminary until the advisor reviews them.

Journey 2 · Teacher referral to counselor

Daniel Carter (teacher) and Sarah Ahmed (counselor)

- 1 **Daniel** Uses **Refer a student: academic concern** to refer a student in about two minutes.
- 2 **System** Opens a **case** in Sarah's caseload with a response due date.
- 3 **Sarah** Reads the referral and adds **versioned notes** that can never be silently edited.
- 4 **Sarah** Books a **meeting** with the parent invited, and it lands on both calendars.
- 5 **Sarah** Drafts an **action plan** and sets a **follow-up date** that appears on her calendar.

A case page with its nine tabs, response due time, action plan and AI assistant.

Journey 3 · Official letter

Rania Nasser (parent) and the registrar

- 1 **Rania** Uses **Request a school document**: chooses Adam, an enrollment letter, bilingual, for an embassy.
- 2 **Registrar** **Approves with a typed signature** in the approvals inbox.
- 3 **System** **Generates the PDF** in English and Arabic from the school's template.
- 4 **Rania** Receives "Your document is ready" and downloads it from **Documents**.

Journey 5 · Parent-teacher meeting

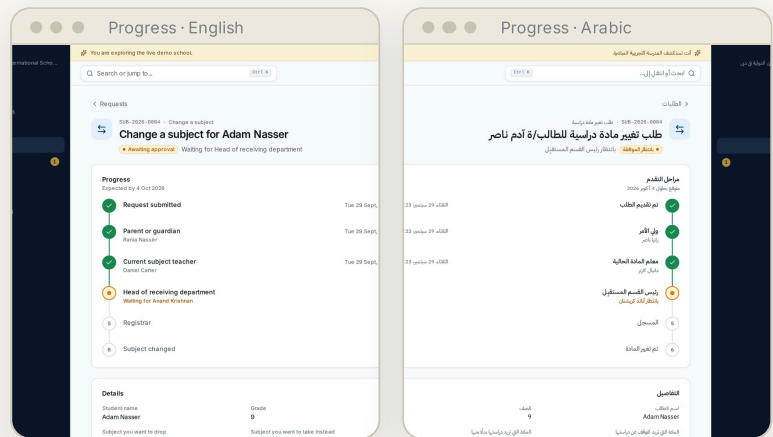

Rania Nasser (parent)

- 1 **Rania** Opens **Book a parent meeting** and picks a child.
- 2 **Rania** Picks a **teacher**, a **day** and a **free slot** from real availability.
- 3 **System** Sends a **calendar invite (.ics)** and schedules **reminders** 24 hours and 1 hour before.
- 4 **Teacher** Marks the meeting as held or missed, and **notes and next steps** are recorded.

Journey 4 · Subject change: Physics to Computer Science

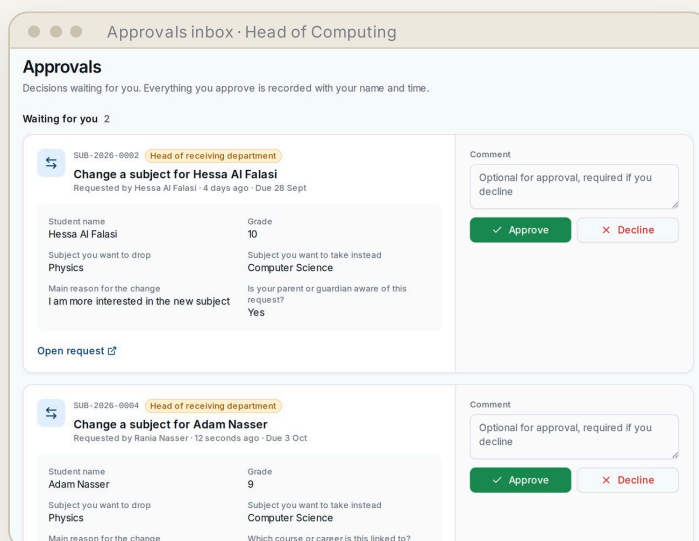

Rania Nasser (parent), Daniel Carter (teacher), Anand Krishnan (Head of Computing) and the registrar

- 1 **Rania** Submits a **subject change** for Adam, with the reason and linked career. Submitting counts as her consent.
- 2 **Daniel** The current subject teacher **approves**.
- 3 **Anand** The head of the receiving department **approves**.
- 4 **Registrar** **Confirms the timetable** change.
- 5 **System** Marks the request complete and **notifies the family**.

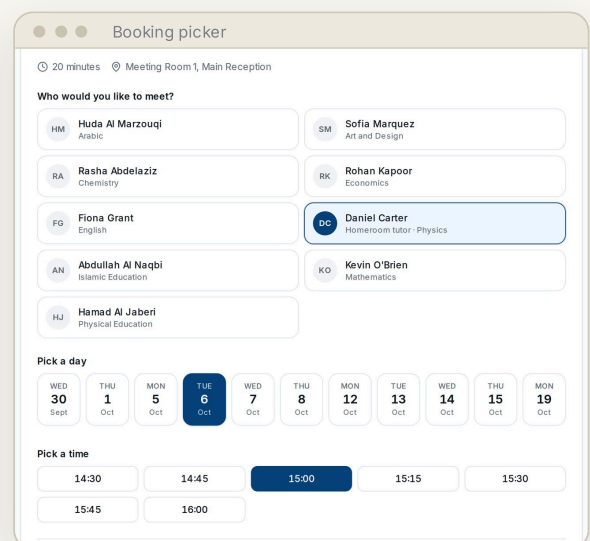

At every step Rania can see exactly who the request is waiting for. Each approval is recorded with a name and time.

The **progress stepper** for the same request in English and Arabic: three steps done, waiting for the head of department.

The **approvals inbox** shows the answers that matter, with approve, decline and a comment that is required when declining.

The **booking picker** offers only real free slots on school days.

Everyone sees what they need, and only what they are allowed to see

Navigation, home dashboards and actions are built from each person's permissions. A feature a person cannot use does not appear.

Students

Home with requests, meetings and tasks. Services, My requests, Meetings, Tasks, Career, Calendar and Documents.

Take the aptitude assessment, choose a career path, book advisors, follow action plan tasks, and raise wellbeing requests such as "I need to talk to someone".

Parents

Every child in one account. Home, My children, Services, Requests, Approvals, Meetings, Calendar and Documents.

Request letters, subject changes, absences, early pickups and bus places; give consent in the approvals inbox; book teachers; download shared letters and reports.

Teachers

Home, Services, Requests, Cases, Approvals, Tasks, Calendar, Students, Safeguarding and Documents.

Refer a student for academic, behavior, wellbeing or learning support; raise a safeguarding concern; approve subject and activity requests; host parent meetings; staff services such as leave and field trips.

Counselors and career advisors

Caseloads with views, the case page, calendar with follow-ups, and for advisors the career guidance dashboard.

Confidential versioned notes, AI briefs and action plans, meetings with families, recorded family notification decisions, and review of career recommendations before parents see them.

Safeguarding leads (DSL and deputy)

The restricted safeguarding queue, full chronology, audit log and chronology export.

Receive new concerns and immediate danger alerts, grant time-limited access, record decisions about telling the family, log external referrals and see who viewed each record.

Leaders and administrators

Principal home with KPIs and charts, Analytics and Audit log. Administrators also get School setup, People, Services and forms, Forms, Workflows, Document templates and Compliance.

Watch volumes and service levels, ask questions about operations, configure the school, and evidence controls to the board and regulator.

Registrar and heads of department

Approvals inbox, requests to process, documents and templates (registrar), and department cases (heads of department).

Approve letters and subject changes with signatures, issue documents, manage student records and imports, and see their department's cases.

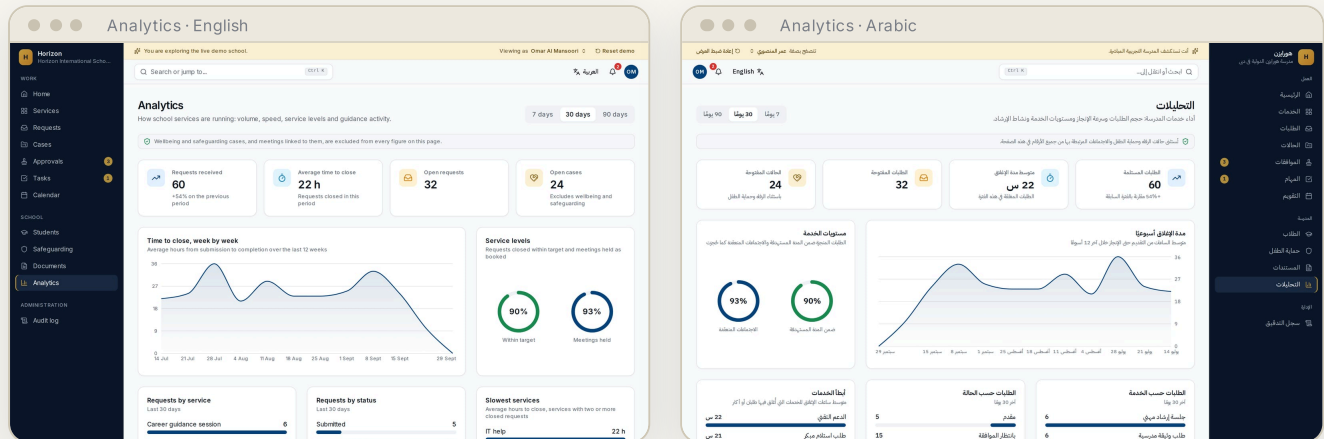

Other staff roles

Wellbeing lead, school nurse and IT support each have their own role and permissions.

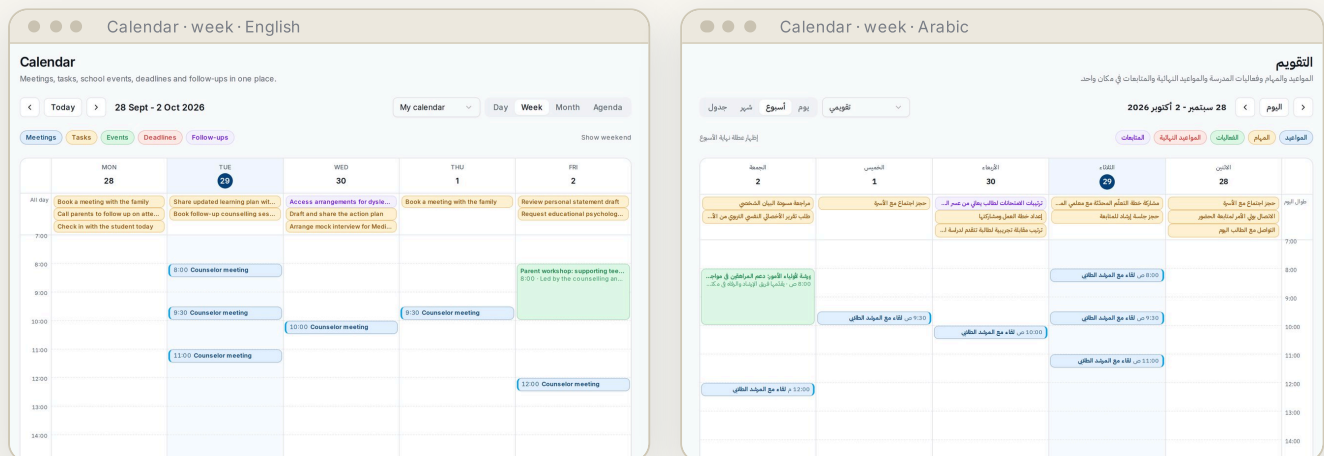

The nurse sees medical records; IT support processes IT tickets; the wellbeing lead receives confidential wellbeing requests.

Built for each role, in both languages

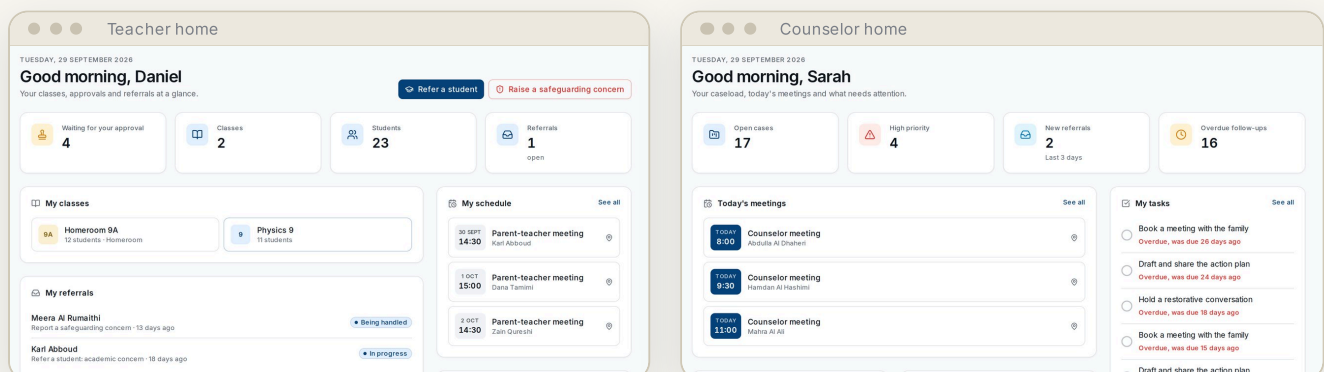

Principals see the whole school at a glance: requests received, average time to close, open requests, open cases and service levels. Wellbeing and safeguarding records are excluded from every figure, and leaders can ask questions answered from the aggregates.

Analytics for Omar Al Mansoori (principal) in English and Arabic. Charts, axes and labels follow the reading direction. Figures shown are demo data.

Sarah Ahmed's calendar: meetings, tasks, school events, deadlines and follow-ups in one week view, with filters and scopes for a colleague, a department or a student.

Every role has its own home. Daniel sees approvals, classes, referrals and one-tap buttons to refer a student or raise a concern. Sarah sees her caseload, today's meetings, new referrals and overdue follow-ups.

Feature catalog

Everything below exists in the product today. Module by module.

Services and requests

- Services hub by category, with featured services and search. 29 services ship with the demo school across 11 categories, from academics and wellbeing to staff operations.
- Each service sets its audience (students, parents, staff or specific roles), form, workflow, meeting type, sensitivity and target turnaround.
- Five sensitivity levels: standard, confidential, medical, wellbeing and safeguarding.
- Request numbers with a service prefix (for example SUB-2026-0004).
- Request page with a live progress stepper, expected completion date, details and cancel.
- Requests can open a case automatically, linked back to the request.
- Command palette search across the school, which never returns sensitive cases.

Approvals

- Approvals inbox with the key answers shown on each card.
- Sequential, parallel (all must approve) and parallel (any one approves) steps.
- Conditional approvers that only apply when a rule matches.
- Approvers resolved at run time: a role, a person, the requester, the student, guardians, the class teacher, the department head or the case owner.
- Typed-name electronic signatures, comments, and a required reason when declining.
- A parent who submits a request is recorded as having consented, so she is not asked to approve her own request.
- Due dates on each approval step; every decision is audited.

Forms

- Drag-and-drop builder with 21 field types: short text, long text, number, email, phone, date, time, dropdown, multiple choice, single choice, checkbox, yes or no, star rating, scale, file, signature, statement, student picker, staff picker, subject picker and consent.
- Multi-step forms with sections, half or full width fields and help text in both languages.
- Show-if conditions on fields and sections, with all and any rules.
- Prefill from the signed-in person and selected student (name, grade, student number, homeroom, guardian, today).
- Saved drafts, preview, versioned publishing and Draft with AI.
- 29 ready-made form templates, one for each shipped service.

Workflows

- Visual builder with 13 step types: start, approval, task, notify, condition, wait, open case, assign, meeting, document, status, AI brief and end.
- Approval and condition steps have two exits (approved or rejected, yes or no).
- Live checks panel that blocks publishing a broken or looping route.
- Dry-run simulation with approve, reject and yes or no choices.
- Save draft, revert, publish to a new version and version history. Runs in progress keep their version.
- Draft with AI in English or Arabic, loaded as an unsaved draft.
- 12 workflow templates, including subject change, document request, parent meeting, wellbeing referral and safeguarding concern.
- Idempotent step runs and wait timers handled by the background worker.

The 11 service categories shipped with the demo school

Academics Wellbeing Careers and University Documents and Letters Meetings Attendance Technology
Campus Life **Safeguarding** Feedback Staff Operations

Examples: change a subject, exam access arrangements, request a school document, recommendation letter, report or request an absence, early pickup, school bus request, IT help, join an activity or club, medical information update, field trip approval, professional development and leave requests, maintenance request.

Meetings and booking

- Meeting types with duration and location, for example career guidance session, counselor meeting, parent-teacher meeting, learning support review and wellbeing check-in.
- Slots calculated in Dubai time from each host's availability, with buffers, minimum notice, a daily maximum and date overrides. Only school days are offered.
- "First available" matching across several hosts (round robin).
- Booking, reschedule and cancel, with everyone told automatically.
- Calendar invites (.ics) and reminders 24 hours and 1 hour before.
- Mark as held or did not attend.
- Families are invited to meetings on sensitive cases only as a recorded staff choice.

Calendar

- Day, week, month and agenda views, with or without weekends.
- Meetings, tasks, school events, deadlines and follow-ups, each filterable.
- Scopes for my calendar, a colleague, a department or a student (by permission).
- Full right-to-left layout in Arabic.

Cases

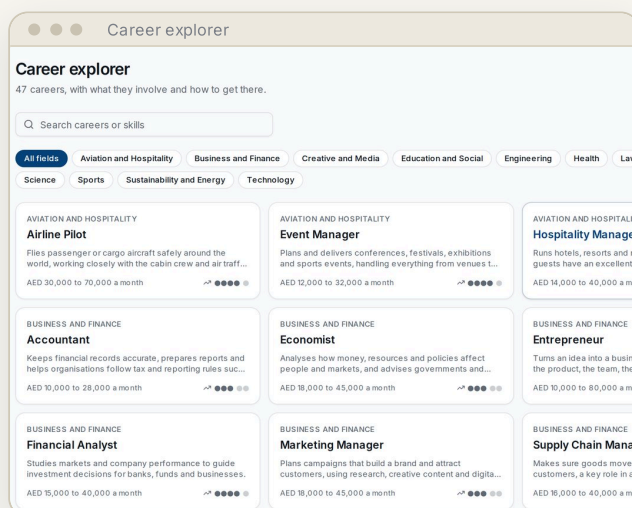

- Case types: academic, behavior, wellbeing, safeguarding, career, learning support, attendance, parent concern and other.
- Case list with saved views; case page with nine tabs.
- Status, priority, assignee, response due time and next follow-up date.
- Versioned notes (note, decision, contact, action) that can be amended with a reason but never deleted.
- Action plans with owners and due dates, approved into tasks.
- Parent notification decisions (notify, defer, do not notify) with reasons.
- External referrals, case team, time-limited access grants and a per-case audit tab.
- Tasks views for each person, with blocking tasks that hold a workflow until done.

Safeguarding

- Raise a concern from anywhere, with concern levels from low to immediate danger and an immediate danger alert.
- DSL and deputy contact cards and guidance for staff on every safeguarding page.
- Restricted queue for the DSL, deputy and explicitly granted staff.
- Referrers see "Received" and "Being handled" only.
- Break-glass access for authorised leaders: reason required, 60 minutes, DSL alerted, every view audited.
- Full chronology and PDF chronology export (DSL only).
- Excluded from search, dashboards, analytics and family portals.

Career guidance

- Career aptitude assessment: 45 statements, about 10 minutes, across nine strengths (for example scientific curiosity, logical and mathematical, creativity and design, helping and teaching).
- Top career matches with the reasons, salary range and UAE demand, from a library of 47 careers in 11 fields.
- Career explorer with a day in the life, how to get there, subjects and where to study.
- University shortlist balanced across reach, target and safety, with application status and requirements, from a library of 50 universities.
- Advisor dashboard and review: recommendations stay preliminary until approved, and parents only see approved ones.

The career explorer: 47 careers across 11 fields, searchable by career or skill.

Documents and letters

- Letter templates in English, Arabic or both, with merge fields (student name in both languages, student number, grade, date of birth, nationality, enrollment date, academic year, request number, addressed to, purpose, issue date).
- Live PDF preview while editing a template. Four templates ship: enrollment confirmation, transcript cover letter, good conduct certificate and transport pass letter.
- Letters generated by workflows, with a reference number, Hijri date and signatory.
- Document library with upload (PDF, image, Word or CSV, up to 10 MB), versions, categories and expiry dates.
- Share with the family, allowed only for standard documents linked to a student.
- Private storage, access checks and signed download links valid for five minutes.

Notifications

- In-app notification inbox and bell, always on.
- Email through a provider abstraction, with per-person email preferences for 18 kinds of update.
- SMS and WhatsApp channels behind the same abstraction. The demo uses a console provider; a live gateway is connected at rollout.
- Bilingual message templates, sent in each person's language.
- Every outbound message queued with an idempotency key, so retries never send twice.

Analytics

- Requests received, average time to close, open requests and open cases, over 7, 30 or 90 days.
- Time to close week by week over 12 weeks; service levels (closed within target, meetings held).
- Requests by service and by status, slowest services, meetings by type, cases by department, career assessments, chosen careers and letters issued.
- Ask about operations, answered from aggregate figures.
- Wellbeing and safeguarding records always excluded.

Administration

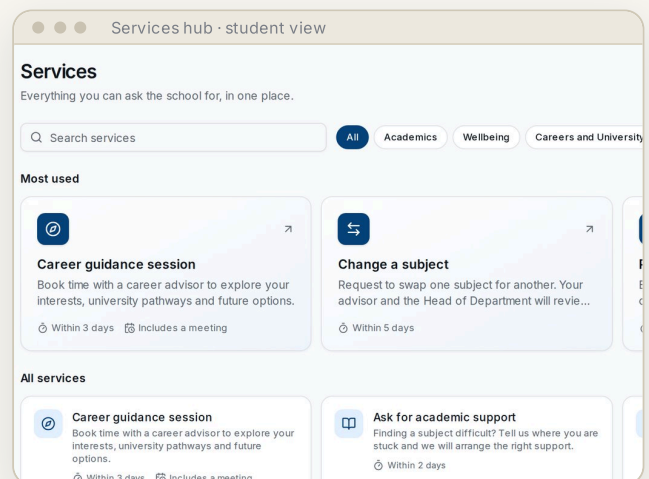

- School setup: names and addresses in both languages, regulator and emirate, default language, school days, Hijri dates, default digits, departments and heads, academic years and campuses.
- People: staff, students, families and imports; add staff, edit roles, invite, suspend, with guardrails so the last administrator cannot be removed.
- CSV import for students and guardians, validated in the browser and on the server, safe to re-run.
- Student profiles with encrypted identifiers and audited reveal.
- Service catalog, forms, workflows and document templates.

Compliance and audit

- AI safeguards, identity document policies, transfers and providers, retention, purposes and consent, data subject requests and incidents.
- Audit log filtered by period, record type and sensitivity, searchable, with CSV export. Entries cannot be edited or deleted by anyone using the app.

Sign-in, demo and onboarding

- Email and password, Google and Microsoft sign-in, switched on per deployment.
- Installable on phones as a web app, and checked at phone width in both languages.
- Live demo with eleven persona accounts, a persona switcher, a per-persona guide that ticks off what you have tried, and a one-click reset with dates relative to today.

The **services hub** for Adam: categories, target turnaround, and which services include a meeting or are confidential.

Security and trust architecture

Controls are enforced by the database and the platform, not only by screens. Here is how student data is protected at each layer.

Tenant isolation in the database

Every school's records carry the school's identifier, and PostgreSQL row-level security on every tenant table keeps each school's data separate. The application connects as a restricted, non-owner database role, so it cannot bypass these policies. An automated isolation test suite checks this against a real database.

Least-privilege roles

14 system roles built on 42 permissions, checked on every page and action. Navigation only shows what a person can use. Administrator rights can only be granted by someone who already holds them.

One access module for sensitive cases

Wellbeing and safeguarding cases are only reachable through a single access module. It decides who can see what, and every view of a sensitive record writes an audit event.

Append-only audit log

The application's database role cannot update or delete audit entries. Approvals, decisions, reveals, exports, break-glass use and sensitive views are all recorded.

Encrypted identifiers

Emirates ID and passport numbers are encrypted with AES-256-GCM, with only the last four digits stored in clear. Revealing a full number needs a permission and is audited.

Signed, expiring file links

Files sit in private storage. Downloads are served only after an access check, through signed links that expire after five minutes.

Idempotent background jobs

A separate worker process handles delivery, reminders, workflow waits, retention and demo resets. Every side effect carries an idempotency key, so a retry never sends a message or runs a step twice.

No student data in logs

Application and worker logs record identifiers and counts only, never names, contents or recipients. Secrets are kept out of the code base.

Hosting

Web service, worker, PostgreSQL and Redis. For production, the database and file storage are hosted in a UAE region:

[hosting region and provider]

Sign-in

School Google or Microsoft accounts, or email and password. Suspended accounts lose access at their next page load.

Certifications

Security assessments and certifications held at contract time:

[to be confirmed]

A 30, 60, 90 day pilot

A suggested plan. It starts small with five high-volume services, proves them with real families, then expands. Timings are adjusted to the school calendar.

Days 1 to 30

Configure and import

- Sign up and run the setup wizard: names in both languages, logo and colors, academic year, curricula and modules.
- Import students and guardians by CSV; add staff and assign roles, including the DSL and deputy.
- Connect Google or Microsoft sign-in.
- Review compliance settings: data region, AI, retention and consent purposes.
- Choose five launch services and adjust their forms, routes and letters.

Days 31 to 60

Train and go live

- Short role-based training: office and registrar, teachers, counselors, DSL, leaders.
- Go live with five services, for example school documents, absence requests, parent meetings, teacher referrals and safeguarding concerns.
- Tell families how to sign in and where to find services.
- Weekly check of service levels and open requests.

Days 61 to 90

Expand and review

- Add counseling, career guidance and subject change.
- Build the school's own services with the form and workflow builders.
- Review analytics with leadership and agree service targets.
- Pilot review and decision on full rollout.

What the school provides

- A project lead and a named administrator.
- Student, guardian and staff lists as CSV exports from the current system.
- Department structure and heads of department.
- The DSL and deputy DSL, and the school's safeguarding procedure.
- Letter wording and signatories for official documents.
- Decisions on AI use, retention periods and consent purposes, with the data protection lead.
- Google Workspace or Microsoft 365 sign-in details from IT.

Support model

Onboarding	[onboarding package and sessions]
Support hours	[days and hours, UAE time]
Response targets	[response times by severity]
Channels	[email, phone, portal]
Uptime commitment	[service level]
Pricing	Core AED 90, Complete AED 150 per student per year (minimum AED 60,000; 15% off for groups)
Pilot terms	90 days, AED 12,000, credited against year one

See it working in your own hands

The live demo is a complete school with months of bilingual history. Pick a persona, follow the guide in the corner, and switch between Arabic and English on any page.

LIVE DEMO

<https://myhorizon.up.railway.app/demo>

No sign-up. Each card signs you in as a real account with its own permissions. Press Reset demo at any time.

Personas to try

Aisha Rahman	School Administrator	Forms, workflows, document templates, compliance and audit log.
Omar Al Mansoori	Principal	Home KPIs, analytics in both languages, ask about operations.
Sarah Ahmed	Counselor	Caseload, versioned notes, meetings with families, calendar week.
Layla Hassan	Career Advisor	Career case, AI brief, action plan approved into tasks.
Daniel Carter	Teacher	Refer a student, raise a safeguarding concern, approve a subject change.
Khalid Yousef	Designated Safeguarding Lead	Restricted queue, chronology, family decisions and view log.
Adam Nasser	Student, Grade 9	Aptitude assessment, career matches, book the advisor, tasks.
Rania Nasser	Parent of Adam and Yara	Letters, subject change, parent meetings, both children in one account.
Mona Al Awadhi	Registrar	Approve letters and subject changes with a signature.
Anand Krishnan	Head of Computing	Approve the subject change as head of the receiving department.
Richard Evans	Deputy Safeguarding Lead	The safeguarding queue from the deputy's seat.

Suggested 20-minute tour

- 1 Adam: take the assessment and book Layla.
- 2 Layla: open the case, prepare the brief, approve a plan.
- 3 Rania: request an enrollment letter; approve it as Mona.
- 4 Daniel: raise a concern; open it as Khalid.
- 5 Omar and Aisha: analytics, builders and compliance.
